

Gas safety course

Everyone who directly or indirectly work with hazardous substances, including all types of gases, are required to have documented competency in this area. This course provides essential and legally required knowledge of gas hazards and gas safety. The training covers the requirements of applicable HSE regulations.

CONTENT

- Gas in different phases
- Delivery forms
- Temperature and pressure
- Laws and regulations
- Marking
- Storage and use of liquid gases
- Storage, handling and use of gas cylinders
- Use of protective equipment
- Safety measures

COURSE DETAILS

- **Type:** e-learning
- **Target audience:** Anyone working directly or indirectly with gases
- **Language:** Norwegian and English
- **Duration:** Ca. 45 minutes

OBJECTIVES

Create sound attitudes and increase your awareness of what you need to consider when working with gases. Give you the ability to find and use information to avoid injuries and negative health effects.
